## J10 Hose Bibb Vacuum Breaker

**IAPMO® LISTED**  
**Complies with ASSE No. 1011**  
**City of Los Angeles, Certified.**

- Economical alternative to the high cost of brass
- Meets or exceeds ASSE 1011 and is listed by IAPMO®
- High strength glass reinforced Zytel® construction
- Corrosion and chemical resistant
- Integral lock screw to meet all code requirements.

The J10 Hose Bibb Vacuum Breaker prevents back-siphonage through the exterior hose bibb connection. Back-siphonage can occur whenever a negative line pressure (vacuum or partial vacuum) is present that causes the reversal of the normal line flow. The use of the J-10 Hose Bibb Vacuum Breaker greatly reduces the possibility of back-siphonage and protects the potable water supply from contaminants that may be present in the hose line or irrigation system.

The J10 is made of high strength, glass reinforced Zytel® and meets or exceeds ASSE 1011 and is listed by IAPMO®. Installation to any standard hose bibb is simple and requires only a standard screw driver with Hendrickson's unique integral lock screw.

### Applications

- Residential Hose Bibbs
- Commercial/Industrial Hose Bibbs
- Drip Irrigation Systems, fertilizer/insecticide applicators, swimming pool adaptors, car washing equipment and soaker hose irrigation.

### Specifications

#### Materials:

Body:	Nylon reinforced Zytel®
Plunger:	Chemical resistant Acetal
Inlet:	3/4" FHT
Outlet:	3/4" MHT
Overall Length:	1.68"
Outside Diameter:	1.38"
Operating Pressure Range:	0-125 PSI

Zytel is a registered trademark of the Dupont Corporation
